

BLS 200 SERIES

FILTERS WITH BAYONET CONNECTION

With features such as high efficiency, ease of use and safety the filters series are the best offered by BLS, protecting from gases and vapours as well as toxic particulates. They are highly efficient, easy to use and highly secure.

ACTIVATED CARBONS

The quality of the activated carbons used by BLS for the filtration of gases and vapours, meets high standards of safety ensuring excellent filtration performances. They are produced without toxic additives such as Hexavalent Chromium (Cr VI).

DUST FILTER

Filtering efficiency is 99,99%. The integrity of the filtering material is ensured by a protective mesh.

b-lock BAYONET CONNECTION

This connection is highly intuitive allowing a quick and safe hold on the mask. It has a locking feedback allowing the user to know if the filter has been properly placed.

TESTED ON FORMALDEHYDE

Specific tests show that ABEK and ABE special BLS carbons are capable to guarantee protection from formaldehyde. Even with class 1 filters it's possible to achieve proper protection. At the end of the test the detected concentration of formaldehyde at the end of the filter is lower than half the Threshold Limit Value according to NIOSH TEB-APR-STP-0039A (Breakthrough Point).

FILTER CANISTER

Made of non deformable ABS allows to have a absolute control over the compression of the activated carbon grains within, this way air corridors are completely avoided making the filter 100% safe.
